Thomaston District Office

Georgia Department of Transportation

The U.S. Green Building Council developed LEED (Leadership in Energy and Efficiency Design), *an internationally recognized green building certification system*, to provide third-party verification that a building or community was designed and built using strategies aimed at improving performance across all the metrics that matter most: energy savings, water efficiency, CO2 emissions reduction, improved indoor environmental quality, and stewardship of resources and sensitivity to their impacts. LEED provides building owners and operators a concise framework for identifying and implementing practical and measurable green building design, construction, operations and maintenance solutions.
