

I-75 Commercial Vehicle Lanes

A Major Mobility Project

P.I. Number: 0014203

FACT SHEET

What is the Project?

The I-75 Commercial Vehicle Lanes project will improve mobility and safety for freight operators and passenger vehicles. The project consists of two barrier-separated commercial vehicle only lanes along I-75 from approximately the I-475/I-75 interchange near Macon to the McDonough area. The project will benefit all motorists by reducing congestion and improving safety while offering direct economic benefits to travelers in Georgia as well as freight and logistic carriers in the southeast.

5 Things You Need to Know

1. Adds new lane miles on I-75 from the Macon area to the McDonough area
2. A commercial vehicle lane provides a commercial vehicle travel-only keeping the general-purpose lanes for the typical motorist
3. Projected to reduce delay on I-75 by 40% in 2030*
4. Reduces maintenance costs on general purpose lanes
5. One of the initial 11 large-scale Major Mobility Investment Program projects to improve transportation in Georgia

What's the Project Status?

The project is in the pre-project initiation phase to evaluate project limits, develop design standards, identify environmentally-sensitive areas, study existing and future freight and passenger traffic patterns, and identify potential access locations. This phase will result in a pre-concept document. The preliminary cost estimate is \$1.8 billion. Both the schedule and estimated cost are subject to change.

What's Next?

Engineering, Environmental,
Design, Right-of-Way
2016-2024

Final Design, Right-of-Way,
Construction
2025-2029
