

## **Rome-Cartersville Development Corridor Environmental Documentation**

In conjunction with the Federal Highway Administration (FHWA), GDOT is sponsoring the preparation of environmental documentation for the Rome - Cartersville Development Corridor (RCDC). Under the National Environmental Policy Act (NEPA), the documentation is intended to promote informed decision-making and collaboration by federal agencies and the public. Among the topics will be the need for the proposed project, the alternatives considered, and the potential impacts to the human, cultural, and natural environments. Currently, the environmental studies are in a phase of extensive data collection throughout two study corridors under consideration. The NEPA documentation will require many milestones such as public involvement, special studies, and environmental analysis, all coordinated with preliminary design of the eventual selected alternative.
