Greetings to my fellow Georgians, and welcome to those of you visiting our state for business or pleasure.

Today, Georgia is the No. 1 state in which to do business and one of the most rapidly growing states in the nation. As such, Georgia’s citizens, visitors and industry leaders require an air transportation system that supplements the growth and prosperity for our state and local communities.

Georgia is home to 104 public-use airports ranging from small general aviation to the busiest commercial airport in the world, Hartsfield-Jackson Atlanta International Airport. Our airports contribute more than $62 billion to Georgia’s economy and are conveniently positioned throughout the state to support commercial, recreational and tourists activities.

Investment in our airports remains a top priority as our cities and counties work to improve the availability and efficiency of our air transportation systems. In fact, my Amended FY 2018 budget helps to grow vital industries in rural communities by providing $25.9 million to extend 13 runways at regional airports throughout the state.

We hope you enjoy your travels, as well as your complimentary copy of the 2018-2019 Airport Directory.

We wish you safe travels and a pleasant flight.

Sincerely,

Nathan Deal

### Explore Georgia Regions

From the coast to the mountains and everything in between, Georgia’s nine tourism regions offer well-known and off-the-beaten-path gems in cities both big and small. Begin your journey by exploring the regions by flying into one of Georgia’s 104 airports. The Explore Georgia Region is listed in the Remarks section of each airport directory page. - **FM091930**
  - FroM: changes are expected at: 2-digit date, 2-digit hour, and 2-digit minute beginning time: indicates significant change. Each FM starts on a new line, indented 5 spaces

- **TEMPO 0920/0922**
  - TEMPOrary: changes expected for <1 hour and in total, < half of the period between the 2-digit date and 2-digit hour beginning, and 2-digit date and 2-digit hour ending time

- **PROB30 1004/1007**
  - PROBability and 2-digit percent (30 or 40): probable condition in the period between the 2-digit date & 2-digit hour beginning time, and the 2-digit date and 2-digit hour ending time

- **BECMG 1013/1015**
  - BECoMinG: change expected in the period between the 2-digit date and 2-digit hour beginning time, and the 2-digit date and 2-digit hour ending time

- Explanations in parentheses “()” indicate different worldwide practices.
- Ceiling is not specified; defined as the lowest broken or overcast layer, or the vertical visibility.
- NWS TAFs exclude BECMG groups and temperature forecasts, NWS TAFS do not use PROB in the first 9 hours of a TAF; NWS METARs exclude trend forecasts. US Military TAFs include Turbulence and Icing groups.

Automated Weather Observing Systems (AWOS) and Automated Surface Observing Systems (ASOS) measure, collect, and disseminate weather data via a network of sensors and provide users with current surface weather condition reports. These are reported through VHF frequencies via NAVAIDS and telephone, and certain airports choose to link reports to the National Weather Service for dissemination to the internet and third-parties.

The capabilities, locations, and contact information of weather reporting stations are shown below and on the following pages.

GCOs are remotely controlled ground-to-ground communications facilities utilizing a VHF radio and a telephone line. Pilots at nontowered airports may use a GCO to contact FSS and Clearance Delivery to obtain an updated weather briefing prior to takeoff, an instrument clearance, or to close a VFR or IFR flight plan. Pilots should key their radio microphone four times at one second intervals for clearance delivery and six times at one second intervals for Macon AFSS. This will initiate a telephone call to the facility chosen. Once a controller answers the telephone, proceed with a push-to-talk and release-to-listen conversation. Inform the controller you are talking from a GCO. GCOs are used only on the ground.

USE OF TRANSPONDER

Federal Aviation Regulations (FAR) Part 91 requires the transponder, if available, including Mode C altitude encoding, to be on while in all controlled airspace. A transponder with Mode C altitude encoding, is mandatory equipment in the following:

1. At or above 10,000’ MSL over the 48 contiguous states or District of Columbia, excluding that airspace below 2,500’ AGL.

2. Within 30 miles of a Class B airspace primary airport, below 10,000’ MSL. Balloons, gliders and aircraft not equipped with an engine-driven electrical system are excepted when operating outside of Class B airspace.

3. Operations within and above all Class C airspace up to 10,000’ MSL.

COORDINATED UNIVERSAL TIME

ATC uses Coordinated Universal Time (UTC) for all operations. UTC, or Zulu time, is based on 24-hour clock, to eliminate confusion across time zones.

To convert from Eastern time to UTC:
Eastern Standard Time + 5 hours = UTC
Eastern Daylight Time + 4 hours = UTC

CRUISING ALTITUDES

If your magnetic course (ground track) is:

CIVIL AIRCRAFT PILOTS, FAR Part 91 requires you file an IFR flight plan to operate under instrument flight rules in controlled airspace. Failure to file could result in a civil penalty not to exceed $1,000 for each violation (Section 901 of the Federal Aviation Act of 1958, as amended). Filing of a VFR flight plan is recommended as a good operating practice. See also Part 99 for requirements concerning DVFR flight plans.
