

GDOT_NAV v2.0 Update Instructions

NOTE: This is an incremental update to a full install of GDOT_NAV v1.0. Please refer to the original installation CD for instructions on installing GDOT_NAV v1.0.

1. Log onto the PC with “**Administrator**” privileges.
2. Download “**GDOT_NAV_V2_0.exec**” to your local hard drive.
3. Change the filename extension to “**.exe**”
4. Right-Click and “**Run As Administrator**” to begin installation of (**GDOT_NAV_V2_0.exe**)

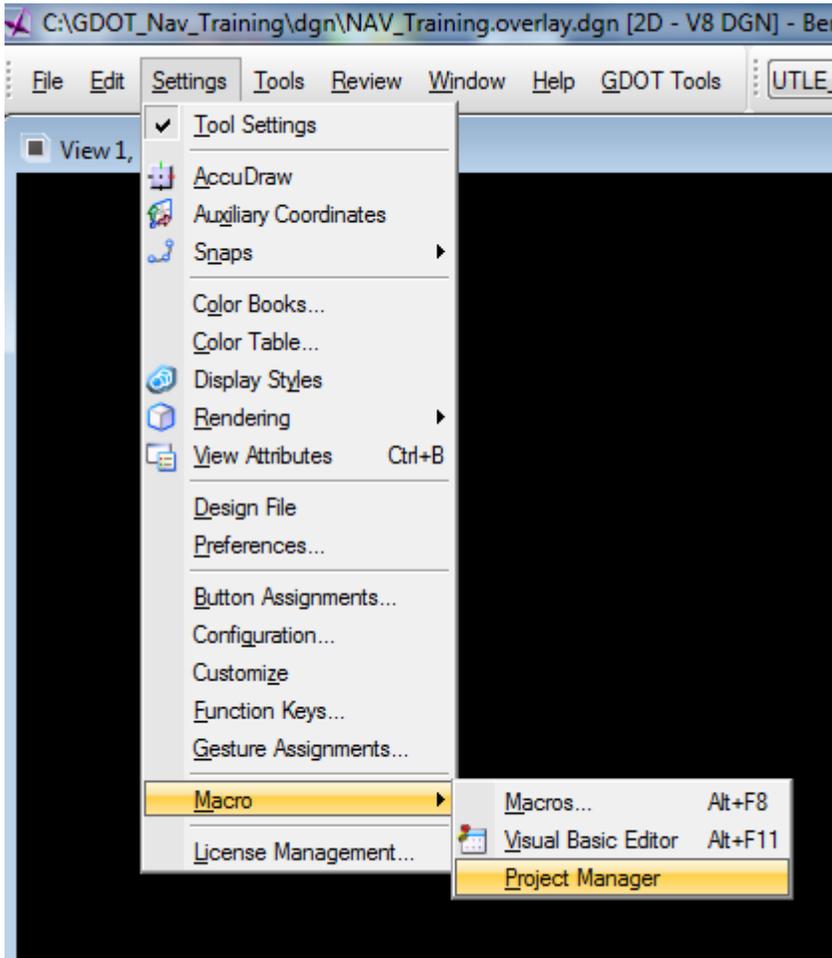

5. When the WinZip dialog opens, confirm the “**Unzip to folder**” is “**C:**” and click **Unzip**.

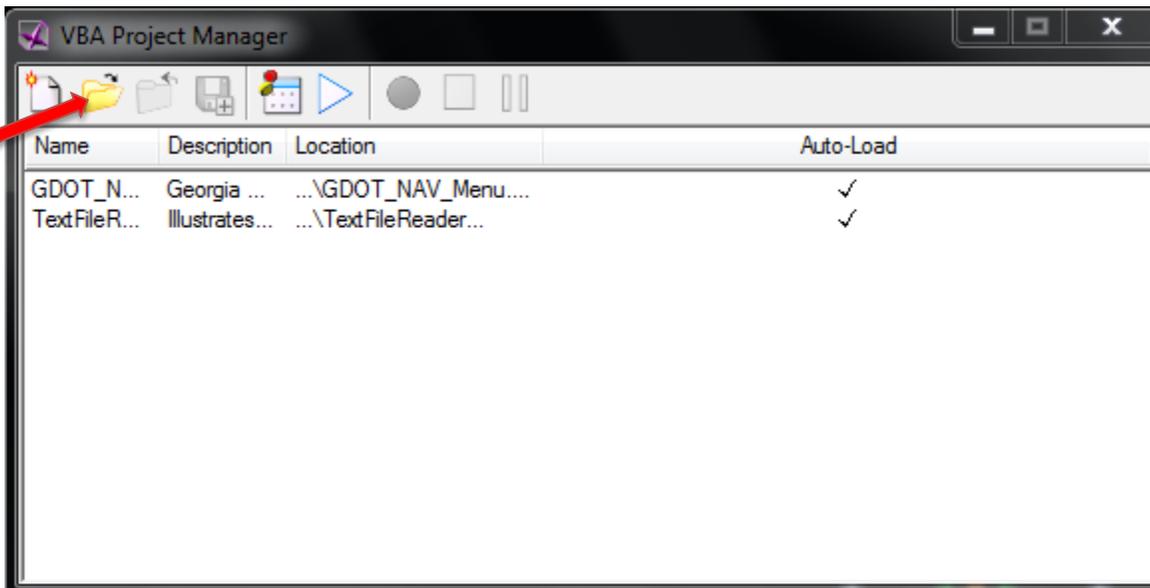

6. After the files have unzipped successfully, click **OK** and **Close** the WinZip dialog.

Installation of the “Export XY Data” Tool

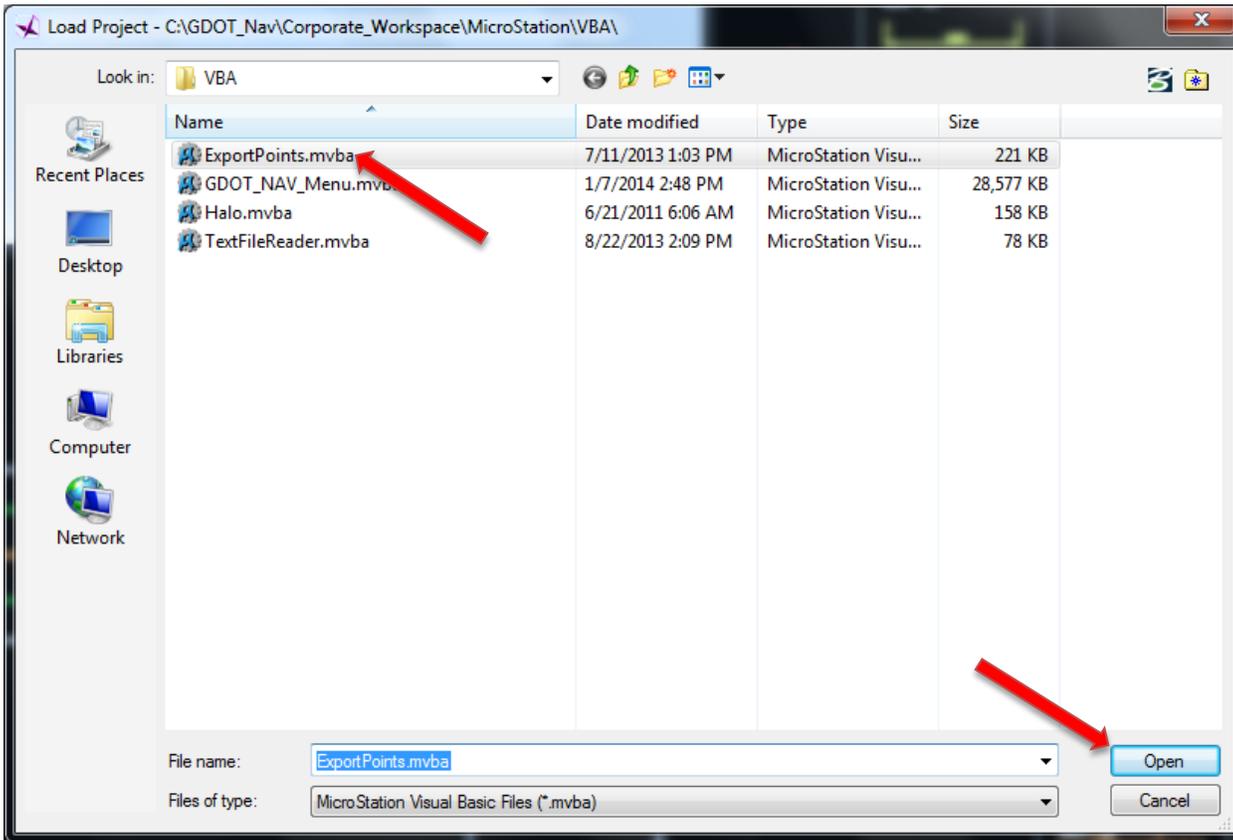

7. Open **GDOT_NAV** with the desktop icon and on the file menu, Click “**Settings**” → “**Macro**” → “**Project Manager**”

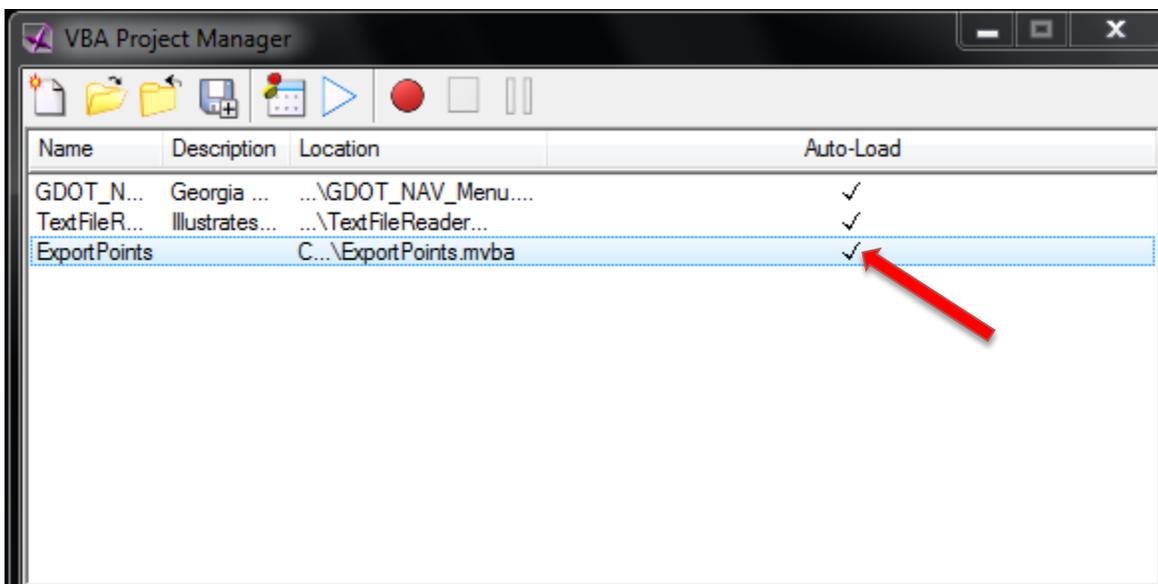

8. When the **VBA Project Manager** dialog opens, click the “**Load Project**” icon shown below.

9. The **Load Project** dialog opens as shown:
10. Select **“ExportPoints.mvba”** and **“Open”**.

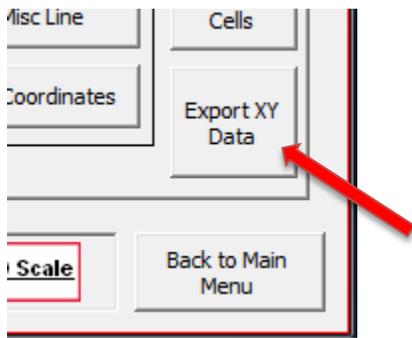

11. In the **VBA Project Manager**, Select the **“Auto-Load”** option.

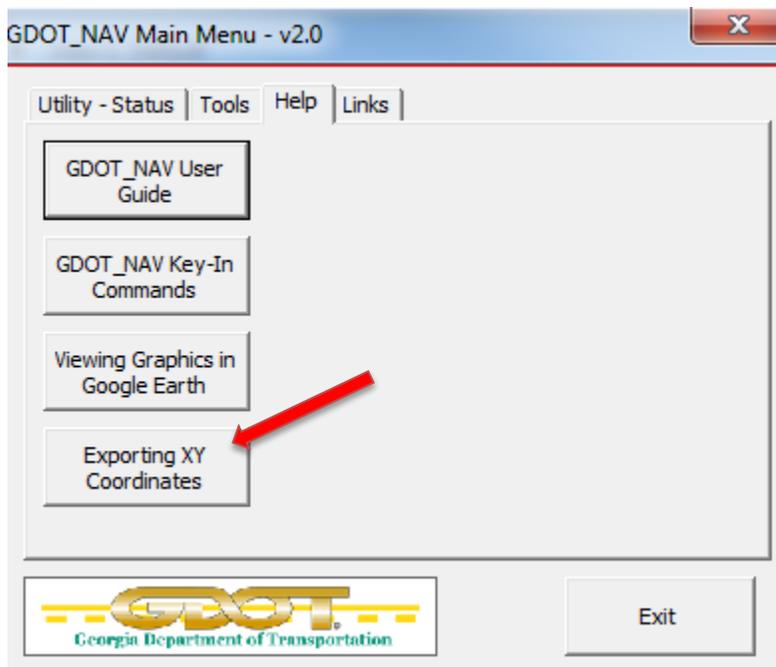

12. Close the **VBA Project Manager**.

13. Open the **GDOT_NAV** main menu and verify that the “**Export XY Data**” tool is available and opens for input from any of the **GDOT_NAV** “**Proposed**” menus.

For additional documentation, please refer to the GDOT_NAV Help document shown below:

For questions or comments about this document or any other **GDOT_NAV** related issue, please contact the GDOT Solutions Center help desk.
