THE NATION'S TOP TRUCK BOTTLENECKS 2025

Since 2002, the American Transportation Research Institute (ATRI) has collected and processed truck GPS data in support of the U.S. Department of Transportation Freight Mobility Initiative. Utilizing an extensive database of freight truck GPS data, ATRI develops and monitors a series of key performance measures on the nation's freight transportation system. Among its many GPS analyses, ATRI converts its truck GPS dataset into an ongoing truck bottleneck analysis that is used to quantify the impact of traffic congestion on truck-borne freight at over 325 specific locations. While other outside analyses may identify congested corridors, no dataset available today specifically identifies granular chokepoints in the nation's truck freight transportation system.

Measuring the performance of freight movement across our nation's highways is critical to understanding where and at what level investments should be made. The information provided through this research empowers decision-making in both the private and public sectors by helping stakeholders better understand how congestion and delays constrain mobility on the U.S. highway transportation system. ATRI's annual bottleneck list provides a clear roadmap for reducing supply chain impediments and guiding investment decisions as Congress begins to focus attention on our country's next transportation investment reauthorization bill.

ATRI's bottleneck analysis incorporates and synthesizes several unique components, including a massive database of truck GPS data at freight-significant locations throughout the U.S., and a speed/volume algorithm that quantifies the impact of congestion on truck-based freight. In addition, the annual reports provide a chronological repository of mobility profiles, allowing congestion changes to be assessed over time. This allows both transportation analysts and planners to conduct performance benchmarking and identify influential factors contributing to congestion and the requisite consequences on freight mobility.

Georgia DOT joins national public awareness campaign to promote safety of transportation construction and maintenance workers

April 21 - 25 is National Work Zone Safety Awareness Week

Georgia Department of Transportation

Interoffice Memo

DATE: April 21, 2025

FROM: Russell R. McMurtry, P.E. *Russell R. McMurtry*

TO: GDOT Employees

SUBJECT: Work Zone Safety Awareness Week 2025

Today kicks off [Work Zone Safety Awareness Week](#) at GDOT and across the nation. This is an annual event during which we join other state and federal transportation agencies to draw attention to the critical importance of safety in and around work zones across the country.

The theme for 2025 is **"Respect the Zone So We All Get Home."** This year's theme urges motorists to pay attention and respect to both work zones and the workers within them, respect workers in work zones - or anywhere - can have long-term effects on their health and safety. Work zones every day (and every night) building and maintaining the infrastructure we all rely on. To keep everyone else, we at GDOT, along with the workers who build and maintain our roads, bridges, and infrastructure safe.
